I. COMINNEX Zrt.'S QUALITY POLICY

Our business policy focuses on our customers as we are aware that satisfying their demands at the highest possible standard significantly influences our market position. We wish to strengthen our existing position in the market and enhance our share through the conscious use of quality management methods while striving to acquire a better knowledge of our external and internal environment, and to apply a process-based approach and a risk-based mindset.

One of our most important endeavours is to realise the harmonious development of our company in a way which ensures that our quality requirements keep pace with our growth. In particular, we attach special importance to producing compounds with a purity equalling or higher than our customers' expectations in the appropriate quantity.

In order to achieve this goal, we use the standard of independent quality control as the basic principle in the quality assurance of our company. Accordingly, the quality and quantity criteria of our samples passed on to our customers are classified by an analytical unit independent of the group that produced them and are checked by a chemical information technology specialist.

In addition to producing products of the quality required by our customers, our aim is to appear in the market with services that meet our customers' future needs as fully as possible. An important objective is to establish and consolidate the quality criteria of the internal standardisation, IT background and coordination of these new services.

We continually develop our quality management system by setting new quality objectives, analysing data generated through quality management and the results of audits, corrective activity and managerial reviews.

We continuously monitor our operating processes and carry out risk analyses of these and of changes to these. We take risk reduction measures where high risks are revealed, and constantly monitor the performance and impact of such processes.

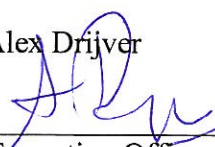

Customer feedback is collected and taken into account, and quality developments are made building on these. Our aim is to meet emergent customer needs in good time.

All employees in our company undertake a commitment in their employment contract to perform their activity complying with the letter and the spirit of the quality management system. Our staff take part in regular training and further training to optimise the practical operation and improvement of our quality management system, and the effectiveness of the training is assessed at regular intervals.

Our policy has been designed in line with the intentions and environment of our organisation and to support our strategic guidelines.

May 20, 2018.

Alex Drijver

Chief Executive Officer
